Credential compromise were at the heart of 81% of the total reported data breaches

\$5M

On average, a data-breach cleanup costs at least \$5 million

*Javelin, Verizon, Ponemon 2018

THREAT CONTINUES TO GROW

with the increase on sophistication and automation of 2-Factor Phishing

WHY CURRENT 2FACTOR AUTHENTICATION IS NOT ENOUGH

BEARER AGNOSTIC

- Current password, OATH one-time passcodes, SMS are bearer instruments that can be intercepted and spoofed for account takeovers
- Deploy unspoofable Anti-Phish Codes to thwart credential compromise

WEAPONIZATION OF AUTOMATED 2FA PHISHING EXPLOITS

- Victim unaware of attackers proxy server (e.g. Modlishka, Evilginx) relaying back & forth login session initiated at the victim's end
- Deploy cost-effective Anti-Phish Codes that detect spoofing and stop account takeovers with no changes to your applications and infrastructure

WHY UBER PASSCODES®?

- Resilient & thwart account takeovers, reduce incidents
- Make credential phishing/MiM totally ineffective
- Uber Passcodes are bearer-sensitive

- Patented technology with no dongles
- User-friendly mobile app & doesn't require additional gadgets

ADVANTAGES OVER FIDO

	No Capex	Authentication Verification Control	No Changes to Existing Federated & Single Sign On	Quantum-safe?	No changes to existing apps
Uber Passcodes®	Yes	Yes	Yes	Yes	Yes
FIDO	No	No, relies on end-user's trust/agent	Needs custom retrofits	Vulnerable	No, needs substantial software changes
